CCDC Inject

INJECT NAME	External Service Evaluation
INJECT ID	EVAL14A

INJECT DESCRIPTION:
The CISO is concerned that our external network presence may be presenting a larger attack surface than necessary. Use an appropriate tool to scan the external interface of the POD to determine what services are available and that may be vectors for security attacks.

INJECT DELIVERABLE
Respond with a business memo that documents the findings. Identify the tool used to accomplish this. List the available services and corresponding protocols that an attacker may leverage. Make an assessment as to whether this service is necessary to be exposed to the external network.
