Collegiate Cyber Defense Competitions

Inject Name	Role of AI in Cyber Defense
Inject ID	BC105

Description

In a recent meeting of the Board of Directors the issue of Artificial Intelligence use in our cyber defense efforts was discussed. The CIO was tasked providing a report at the next meeting on how the organization is currently using AI in cyber defense, and if there are opportunities to leverage more of AI technology in this effort. Describe those opportunities.

Some areas of discussion were the opportunity to reduce the number of team members needed, improving the productivity of team members, and the ability to analyze event data or machines states in a timely manner.

Be practical and respond within the context and limitations of the competition environment.

Deliverable

A management report to be included in the next Board of Directors information packet ahead of the next meeting.
