INTEROFFICE MEMORANDUM

To: CISO

From: Team 02

Date: October 24, 2026

Subject: Deploy End-Point Protection

Summary:

This document outlines our decision to use ClamAV and Windows Defender as our chosen Anti-malware and Anti-Virus solution. These tools have been implemented on each of the Linux and Windows devices respectively.

CLAMAV Use and Installation

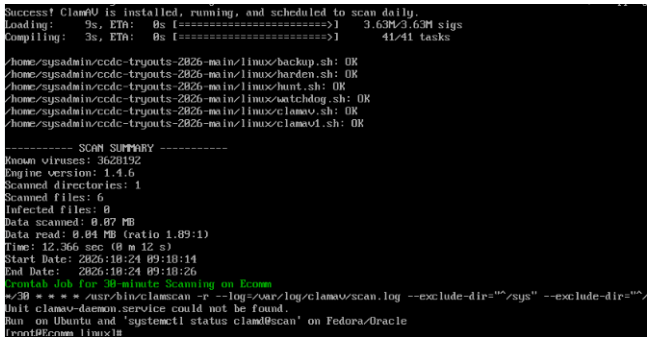

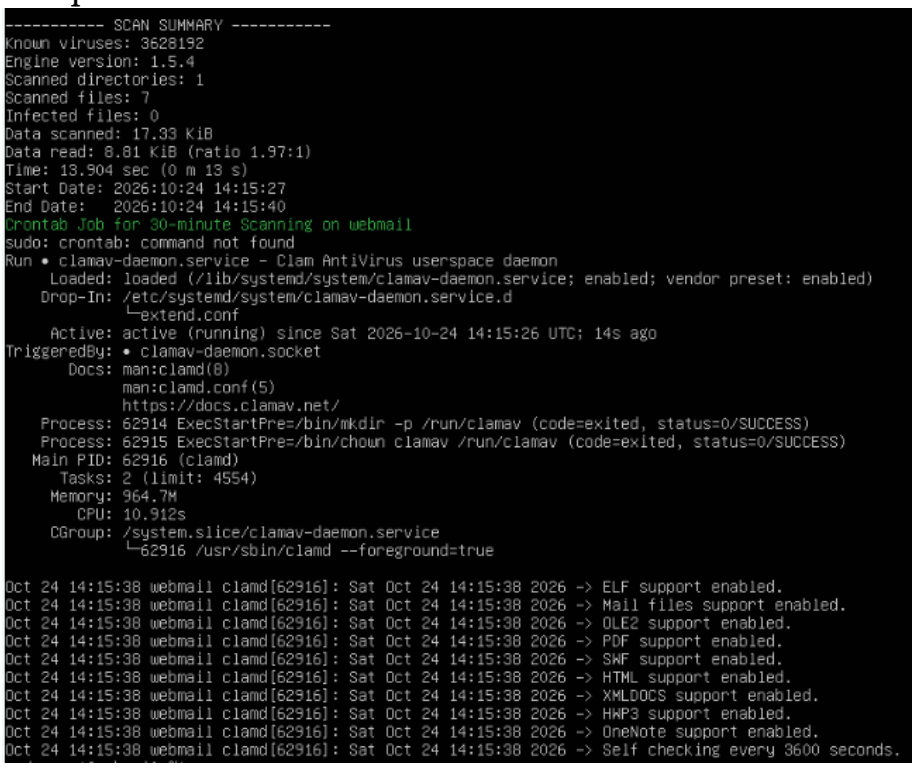

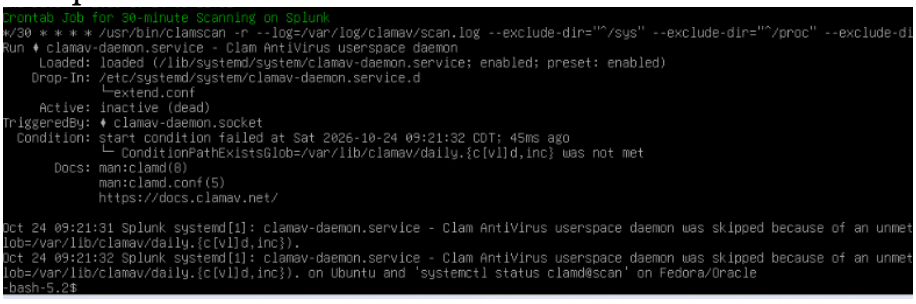

We decided to use ClamAV as our Anti-malware solution for our Linux devices as it effectively scans all files in a specified directory and compares them against known malware variants to identify malicious or infected files that match known malware patterns. We installed ClamAV on each of the devices and did a sample run on the current directory to show that it operates successfully. After installation was completed, we likewise created a CronJob to run the clamscans every 15 minutes. This ensures that our devices are consistently monitoring their file systems to identify malicious files and remain secure.

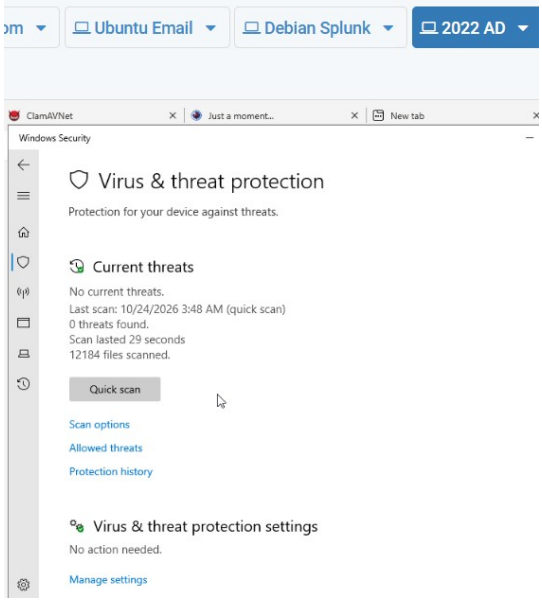

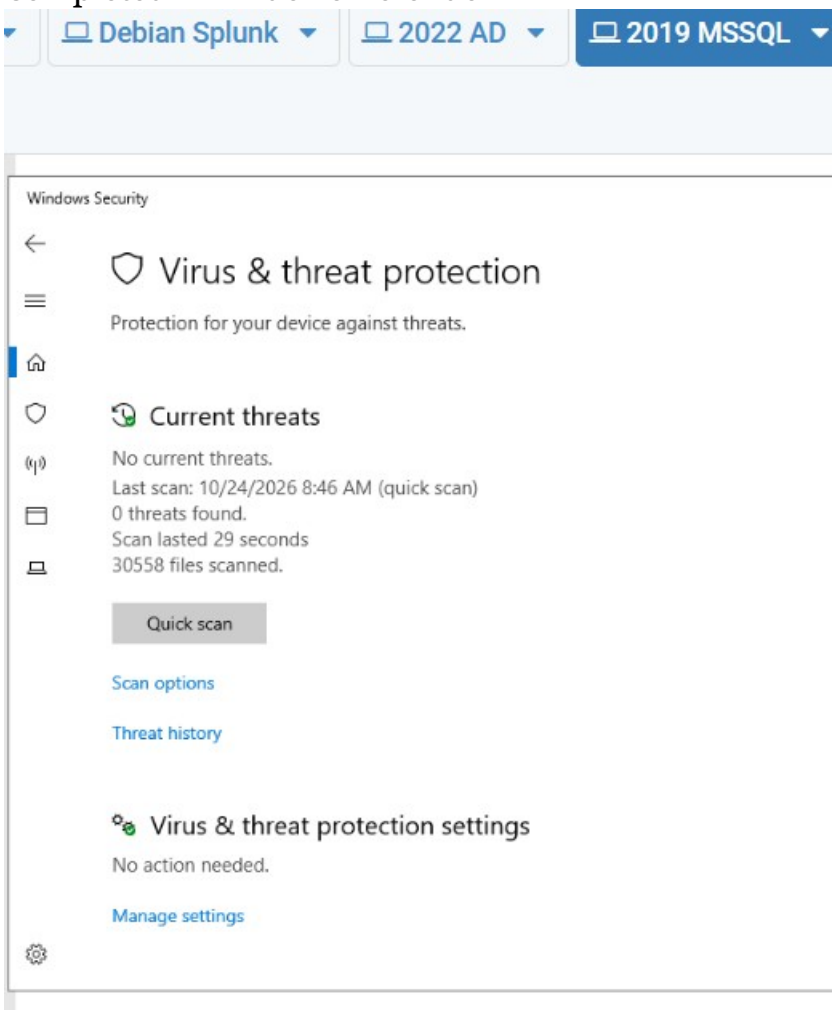

Windows Defender Use and Installation

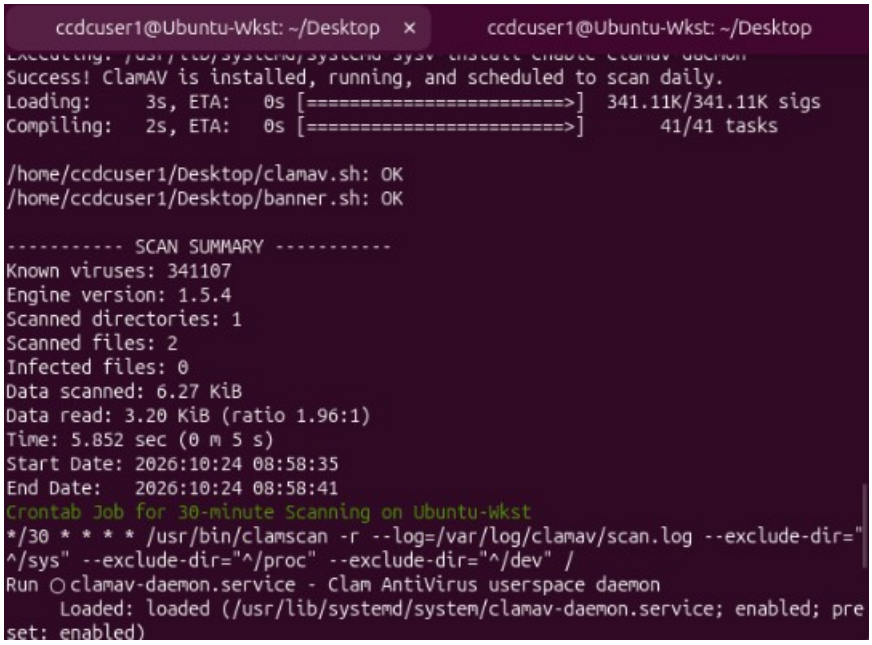

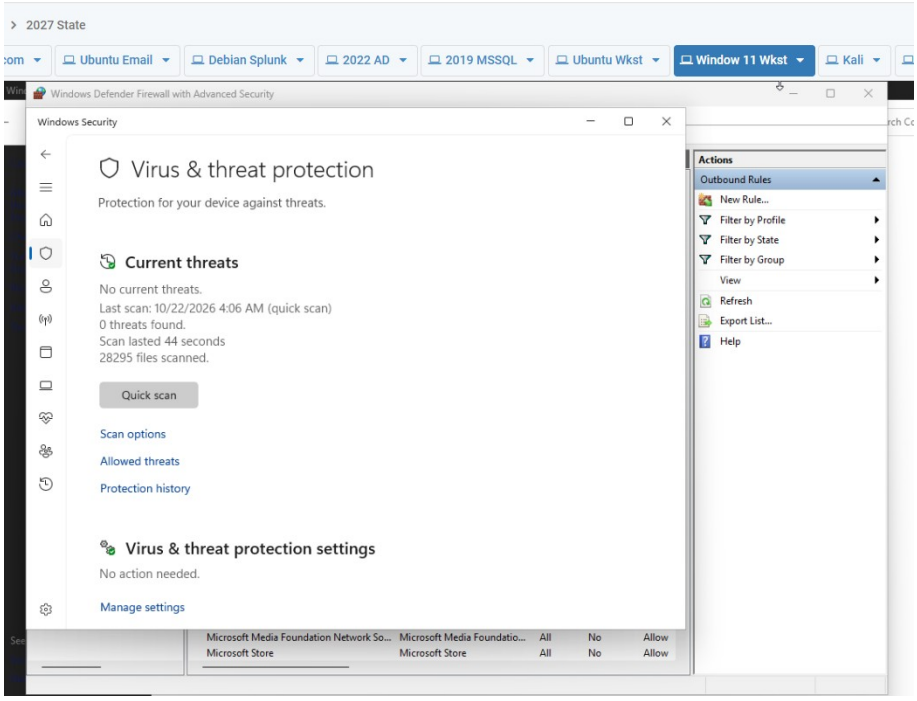

Windows Defender is pre-installed on all Windows Workstations and Servers and is an effective Anti-Malware and Anti-Virus solution. Windows Defender runs consistent file scans on the devices most important directories and has options to scan all files on the system for suspicious patterns. Windows Defenders works with the Windows Defender advanced firewall to block incoming malicious traffic and malicious files that are being transmitted to the device. Ensuring Windows Defender is installed and running on each Windows device is an essential step to securing our networks and devices. Windows Defender likewise informs the user if any malicious files are identified.

Evidence of AV Implementation on each device

Service	ClamAV Installation Status
Ecom Rocky Linux	Completed - ClamAV

Service	ClamAV Installation Status
	
Email Ubuntu Server	Completed - ClamAV 
Splunk Debian Server	Completed - Clamav 
AD Windows Server	Completed – Windows Defender

Service	ClamAV Installation Status
	
MSSQL Windows Server	Completed – Windows Defender 
Ubuntu Workstation	Completed - ClamAV

Service	ClamAV Installation Status
	
Windows Workstation	Completed – Windows Defender 

If there are any concerns, questions, or clarifications, please do not hesitate to reach out.

With Regards,
