INTEROFFICE MEMORANDUM

To: CISO

From: Team 02

Date: October 24, 2026

Subject: Perimeter Assessment

Summary: We performed the scan and discovered the services that are observably open or filtered. A majority of our open services are filtered and have specific rules for access. These open services are listed below.

Nmap on Network Hosts

We used nmap for host discovery because it is the built in process that systematically iterates through the ports and initiates a relationship to see if it is open. It then records the port and gives us information about the service that is open or closed. This information ranges from protocol to a description of the service.

```
> nmap -Pn -T4 -sV -iL “devices.txt”
```

Results

Host Name	Private IP Address	Exposed Ports/Services Identified
Rocky Ecom	172.20.240.10	This device is currently experiencing network issues
Ubuntu Email	172.20.240.15	This device is currently experiencing network issues
Debian Splunk	172.20.240.20	22/tcp SSH 8000/tcp http 8089/tcp ssl/http
2022 AD	172.20.240.100	5985/tcp http

Host Name	Private IP Address	Exposed Ports/Services Identified
2019 MSSQL	172.20.240.120	22/tcp ssh 80/tcp http 135/tcp msrpc 445/tcp microsoft-ds 1433/tcp ms-sql-s 5985/tcp wsman
Ubuntu Wkst	172.20.240.112	22/tcp ssh 135/tcp msrpc 445/tcp microsoft-ds
Windows Wkst	172.20.240.113	This device is currently experiencing network issues

If there are any concerns, questions, or clarifications, please do not hesitate to reach out.
